

United Nations Environment Program (UNEP) aims at providing leadership and encouraging partnership in caring for the environment by inspiring, informing and enabling nations and people to improve their quality of life without compromising that of future generations.

Following the multiple initiatives from UNEP, **Kalyves Beach Hotel** is committed not only to protect the environment but also to invest in **Green** technology.

Green initiatives in Kalyves Beach Hotel

Recycling: In **Kalyves Beach Hotel** we are cooperating with the local municipality in separating our solid wastes (to the degree it is possible and efficient) into paper, aluminum and plastic. Please help us in the process by using our “**Recycle**” bins next to the pool area.

Energy conservation:

Heating and Hot-Water: In order to minimise the use of electricity (and thus CO₂ emissions) the heating produced by the pumps of air-conditioners is transferred to the water-boilers and thus contributes to the heating of water. This method has reduced approximately by 40% the use of oil to operate **Kalyves Beach Hotel** boilers.

Electricity-lighting: In many areas of **Kalyves Beach Hotel** we use energy saving Compact Fluorescents (CFs) bulbs of 60-watt (produces more light per watt used) so as to minimise electricity consumption and thus CO₂ emissions.

Rooms and communal areas: To minimise electricity consumption (and thus CO₂ emissions) we have placed in all rooms “card activation electricity switches” so as electricity is off when guests are not in the room. In communal areas we have placed sensors that switch-on lights only when guests are present.

Balconies and glass: In all rooms, part of the balconies and the balconies’ doors, are made from glass (proper thermal isolation glass) so as to increase light penetration in the rooms and reduce electricity consumption.

Towels: We advise guests to voluntarily use the same pair of towels for at least 2 days so as to minimise the waste of water and the use of electricity.

Water conservation: All toilet flushes used in **Kalyves Beach Hotel** have a double switch which gives the opportunity to reduce by ½ the consumption of water. In all bathrooms and showers we have used material that can help in reducing water consumption.

How to reduce your Carbon Footprint while staying in Kalyves Beach Hotel

Recycling: Please use the waste bins we have in indicated areas to separate waste between Paper, Aluminium and Plastic.

Electricity: Please do not leave your room key-card inside the room when you leave. This reduces the chance of electricity consumption when you are not in the room.

Water: Please use the same towel set for at least 2 days so as to save energy and water.

Think Green !!
